

Absorbable Sutures

Atramat® PGC25

Synthetic, absorbable, monofilament suture, presented in violet or undyed.

Made of a copolymer of Poly(glycolide co-epsilon-caprolactone).

The tissue reactivity is minimal.

Absorption occurs through progressive hydrolytic action; completed between 90 and 120 days.

The material retains approximately 60% of its initial tensile strength by the first week.

Color code: Light Orange.

Frequently used in soft tissue coaptation.

CHARACTERISTICS + BENEFITS

High tensile strength = Excellent tissue support.

Absorption through hydrolysis = Predictable absorption rate and minimal tissue reaction.

Monofilament with uniform diameter = Smooth passage through the tissue.

Excellent knot coupling = Providing excellent security.

Violet color = Excellent visibility in the operating theatre.

Hermetically sealed packaging = Ensured stability and sterility of the product.

ABOUT

Indicated for general approximation of soft tissue.

KNOTTING: When used with thick gauges (1-0, 2-0) it is preferable to tie both a surgeon knot and simple knot. This will allow the surgeon to adjust the tension accordingly. An additional square knot is recommended according to the surgical circumstances and the surgeon experience.

When applied in thin gauges (3-0, 4-0, 5-0, 6-0), initially two square knots are recommended with 2 or 3 additional throws, leaving the ends of the knots 4 to 5 mm long subject to the surgical circumstances and the surgeon experience. Damaging the suture thread with forceps, needle holders and so on, should be avoided.

The ATRAMAT® PGC25 is a copolymer composed of Poly (glycolide-co-Epsilon-caprolactone) in the following approximate percentages:

Polyglycolic Acid75%

Polycaprolactone25%:

Sutura sintética, absorbible, monofilamento en color violeta e incoloro.

Compuesto de un copolimero de Poli(glicolida co-épsilon-caprolactona).

Ofrece mínima reactividad tisular.

La absorción ocurre a través de una acción hidrolítica progresiva que se completa entre 90 a 120 días.

El material mantiene su resistencia tensil al 60% a la primera semana.

Código de Color: Naranja claro.

Frecuentemente utilizado en tejidos de mediana cicatrización.

CARACTERÍSTICAS + BENEFICIOS

Alta Resistencia tensil = Excelente soporte al tejido

Absorción por hidrólisis = Tasa de absorción predecible y mínima reactividad tisular

Monofilamento con diámetro uniforme = Paso suave por los tejidos

Excelente acoplamiento del nudo = Acoplamiento plástico y excelente seguridad del nudo

Color violeta = Excelente visibilidad en el campo quirúrgico

Empaque hermético = Garantía de estabilidad y esterilidad del producto

ACERCA DE

Recomendado para cualquier procedimiento quirúrgico donde se requiera un monofilamento, sintético absorbible.

Anudado: Cuando se utilizan calibres (2, 1, 0, 2-0) es preferible realizar un doble nudo quirúrgico y después un nudo sencillo. Esto le permitirá al cirujano ajustar la tensión del nudo. Posterior a esto se realizara un nudo cuadrado de acuerdo a las circunstancias y la experiencia del cirujano.

Cuando se utilizen calibres (3-0 al 7-0) se anudará primero con un nudo doble, después dos o tres nudos sencillos, dejando las terminaciones del nudo de 4 a 5mm de largo; dependiendo de las circunstancia y experiencia del cirujano.

El PGC25 Atramat® es un copolímero de Poli(glicolida co-épsilon-caprolactona) con los siguientes porcentajes aproximados:

ácido poliglicólico.....75%

Policaprolactona.....25%

Suturas Absorbibles
Atramat®PGC25

Retains 60% (violet thread) 50% (non-dyed thread) tensile strength at 1st week and 30% (Violet thread) 20% (non-dyed thread) tensile strength at 2nd week

Resistencia tensil en la 1er semana, 60% (hebra violeta) 50% (hebra incolora), 2da semana el 30% (hebra violeta) y el 20% (hebra incolora).
